What Did You Learn?

1. Django

I learned how to create a Django project, configure URLs, write views, and handle user requests.

2. Box Selection

I learned how to select a suitable shipping box by comparing product dimensions with available box sizes.

3. Testing

I learned that testing helps check whether the code works correctly. All 6 tests passed successfully.

4. Problem-Solving

I learned how to identify errors, read error messages, and fix problems step by step.

5. AI Usage

I learned how to use ChatGPT to understand concepts and solve errors. I also learned the importance of understanding and testing the code instead of blindly copying it.
